StockEvent Lens — Batch 015 Intelligence Dashboard

Articles 071–075 Analysis, Vector Embedding Sensitivity & Macro Bond Market Thresholds

Batch ID
`batch_15 (Articles 071-075)`

TEST 071
Original — 100% Base
Global bond selloff weighs on S&P 500 after record high; 30-year yield at 5.719% ahead of $39B auction.

TEST 072
Repeat — 96% Overlap
Re-syndicated commentary on bond selloff, 5.719% 30-year yield, and $39B Treasury auction.

TEST 073
Update — +25% New Info
Strong $39B auction demand pulls 30-yr yield down to 5.61%; FOMC minutes lift rate-sensitive stocks.

TEST 074
Conflict — Dispute (Yields/Auction)
Disputes market direction & metrics: S&P closed lower, 30-yr yield fell to 4.85%, RBI cut rates 25 bps, $25B auction.

TEST 075
Different — 0% Overlap
AMD balances Treasury yield pressures with 2027 supply expansion and agentic AI CPU growth, triggering Group 030.

Technical Analysis: Macro Financial Entity Vectors vs. Contradictory Yield & Auction Metrics

Dense vector embeddings (e.g. BAAI/bge-small-en-v1.5) exhibit high cosine similarity (~0.88-0.92) across financial market reports because articles share macro terminology ("Treasury auction", "FOMC minutes", "S&P 500", "yields", "Reserve Bank of India"). However, opposing numerical directions (e.g. 30-year yield at 5.719% vs 4.85%, RBI 25 bps hike vs 25 bps cut, $39B vs $25B auction size) create severe financial contradiction blindness.

```
// Formula: Formal Conflict Detection Condition
Conflict_State = ( Cosine_Similarity(E_orig, E_cand) > τ_sim ) && ( ΔF_contradiction == 1.0 )
where τ_sim = 0.60, and ΔF_contradiction = 1.0 indicates a numerical yield direction or monetary policy contradiction.
```

1. Dense Embedding Macro Blindness
Dense vectors map "rate hike 25 bps" and "rate cut 25 bps" into close proximity due to identical policy context, missing directional disputes.

2. LLM Evaluation Override
Explicit quantitative rule-matching overrides semantic similarity when hard macro disputes (yield deltas, auction figures, central bank actions) occur.

Article Relationship & Percentage Breakdown (Batch 015)

FILE IDENTIFIER	PATTERN LABEL	KEYWORDS IDENTIFIED	SIMILARITY %	DELTA %	CLASSIFICATION RATIONALE
test_071_original	Original (%5=1)	S&P 500 record close, 30-yr yield 5.719%, $39B Treasury auction, RBI 25 bps hike, Momo crowd	100%	Baseline	Establishes baseline macro frame on global bond selloff and upcoming $39B auction.
test_072_repeat	Repeat (%5=2)	Bond selloff, 30-yr yield 5.719%, $39B auction, RBI hike, carry trade	96%	0% New Facts	Rephrased market commentary detailing identical yield numbers, auction size, and macro events.
test_073_update	Update (%5=3)	**Strong $39B auction demand**, 30-yr yield drop to 5.61%, post-FOMC minutes rally, Intel/Tesla gains	82%	+25% Operational Facts	Advances event state by reporting successful $39B auction outcome, yield drop to 5.61%, and post-FOMC stock recovery.
test_074_conflict	Conflict (%5=4)	**S&P closed lower**, 30-yr yield 4.85% drop, RBI 25 bps rate cut, $25B auction	87% Match	$\Delta F_{contradiction}$ = 1.0	Directly contradicts baseline report: asserts S&P fell, yields dropped to 4.85%, RBI cut rates, and auction was $25B.
test_075_different	Different (%5=0)	AMD $1T market cap, 2027 chip supply ramp, TSMC/Foxconn, EPYC agentic AI CPUs, Mizuho/Citi targets	0%	Group 030 Trigger	Has zero domain overlap with macro bond auction mechanics; triggers standalone Group 030 event cluster.

Group 029 — Consolidated Event Summary

4 Articles (071–074)

Global bond markets experienced sharp yield increases ahead of a key U.S. 10-year Treasury auction and FOMC minutes release, with the U.S. 30-year Treasury yield reaching 5.719% and the RBI raising rates by 25 bps to 5.5% (Articles 071–072). Market conditions subsequently stabilized as **strong demand at the $39 billion Treasury auction pulled the 30-year yield down to 5.61%, sparking an equity market recovery supported by cautious FOMC minutes** (Article 073). However, market direction and macro metrics are in direct conflict: initial reports noted the S&P 500 closed at a record high while 30-year yields surged and RBI hiked rates, whereas a contradictory report claims the **S&P 500 closed lower on heavy volume, 30-year yields fell to 4.85%, the RBI cut rates by 25 bps, and the auction size was $25 billion** (Article 074 ; $\Delta F_{contradiction}$ = 1.0).

✓ Update Preserved: Strong $39B Treasury Auction & Yield Drop to 5.61%
✓ Conflict Preserved: Record High / 5.719% Yield / $39B vs Lower / 4.85% Yield / $25B
✓ Duplicate Removed: Article 072 Consolidated

Group 030 — Standalone Summary

1 Article (075)

Advanced Micro Devices (AMD) is balancing short-term macro yield pressures with strong long-term AI growth , planning a substantial chip supply expansion in 2027 with TSMC, Foxconn, and memory suppliers while securing EPYC processor market share for agentic AI workloads at Meta and OpenAI (Article 075). Analysts maintain a Buy consensus rating with price targets up to $800.
