StockEvent Lens — Batch 023 Intelligence Dashboard

Articles 111–115 Analysis, Vector Embedding Sensitivity & Conflict Thresholds

Batch ID
`batch_23 (Articles 111-115)`

TEST 111
Original — 100% Base
NVIDIA CEO Jensen Huang rejects 2030 AI doomsday on CBS; asserts 0% extinction risk[cite: 29, 32].

TEST 112
Update — +22% New Info
CBS teaser release: Huang urges moving as fast as possible, opposing Anthropic slowdown calls[cite: 29, 33].

TEST 113
Repeat — 96% Overlap
Restates 0% extinction probability and CBS interview quotes with zero new facts[cite: 29, 34].

TEST 114
Conflict — Dispute (10%)
Contradicts extinction odds: claims Huang cited a ~10% chance AI ends world by 2030[cite: 29, 35].

TEST 115
Different — 0% Overlap
NVIDIA Isaac ROS 5.0 release at ROSCon starting Group 046[cite: 29, 31].

Technical Analysis: Dense Vector Blindness vs. Temporal Contradiction Metrics

A core challenge in automated financial news aggregation is that dense vector models (e.g., BAAI/bge-small-en-v1.5, OpenAI Ada-002) compute cosine similarity based on *semantic context* rather than *probability value fidelity*. Modifying risk percentages (e.g., "0% chance" in test_111 vs "about a 10% chance" in test_114) yields extremely high vector similarity (~0.92) because both texts share identical surrounding context tokens ("Jensen Huang", "CBS News", "end of the world", "2030", "doomsday narrative").

```
// Formula: Formal Conflict Detection Condition
Conflict_State = ( Cosine_Similarity(E_orig, E_cand) > τ_sim ) && ( ΔF_contradiction == 1.0 )
where τ_sim = 0.60, and ΔF_contradiction = 1.0 indicates a hard numerical probability or extinction risk dispute.
```

1. Dense Embedding Blindness
Dense embeddings project words into high-dimensional space where "0% chance" and "10% chance" share near-identical context embeddings. Thus, pure vector cosine distance fails to flag this quantitative probability conflict.

2. LLM Evaluation Override
To prevent misinterpreting executive AI risk statements, the LLM reasoning layer performs explicit attribute-value probability verification, overriding high vector similarity when $\Delta F_{contradiction} = 1.0$ is detected.

Article Relationship & Percentage Breakdown (Batch 023)

FILE IDENTIFIER	PATTERN LABEL	KEYWORDS IDENTIFIED	SIMILARITY %	DELTA %	CLASSIFICATION RATIONALE
test_111_original	Original (%5=1)	Jensen Huang, CBS News, 0% chance end of world 2030, doomsday narratives[cite: 29, 32]	100%	Baseline	Establishes breaking story frame on Jensen Huang rejecting 2030 AI doomsday on CBS News[cite: 29, 32].
test_112_update	Update (%5=2)	**CBS teaser video**, go as fast as we can, Dario Amodei slowdown, Meta Muse delay[cite: 29, 33]	84%	+22% Policy Narrative	Advances policy narrative via CBS teaser footage emphasizing racing as fast as possible while pushing back on Anthropic slowdown calls[cite: 29, 33].
test_113_repeat	Repeat (%5=3)	0 per cent chance, 2030 end of world, Jacob Coxon, CBS Sunday interview[cite: 29, 34]	96%	0% New Facts	Restates identical interview quotes, 0% doomsday claims, and Jacob Coxon background without new facts[cite: 29, 34].
test_114_conflict	Conflict (%5=4)	**10% chance doomsday dispute**, puts odds at 10%, competing CBS account[cite: 29, 35]	92% Match	$\Delta F_{contradiction}$ = 1.0	Directly disputes extinction probability, claiming Huang cited a ~10% chance of 2030 doomsday rather than 0%[cite: 29, 35].
test_115_different	Different (%5=0)	Isaac ROS 5.0, ROSCon Toronto, ROS Lyrical, FoundationPose, Jetson Thor[cite: 29, 31]	0%	Group 046 Trigger	Zero domain overlap; triggers standalone Group 046 event cluster for NVIDIA Isaac ROS 5.0 release[cite: 29, 31].

Group 045 — Consolidated Event Summary

4 Articles (111–114)

NVIDIA CEO Jensen Huang told CBS News anchor Jo Ling Kent that warnings of AI causing human extinction by 2030 are irresponsible doomsday narratives not grounded in science (Articles 111, 113)[cite: 29, 32, 34]. Executive stance and policy narrative advanced as **CBS released teaser footage where Huang rejected calls by Anthropic's Dario Amodei to slow down development, declaring the U.S. should move as fast as possible while ensuring products are never shipped before they are safe** (Article 112)[cite: 29, 33]. However, the exact probability estimate is in direct conflict: original reports confirmed Huang asserting a 0% chance of 2030 being the end of the world, whereas a contradictory report claims **Huang stated there is about a 10% chance AI ends the world by 2030** (Article 114 ; $\Delta F_{contradiction}$ = 1.0)[cite: 29, 35].

✓ Update Preserved: CBS Teaser Release on Moving Fast vs Anthropic Slowdown
✓ Conflict Preserved: 0% Extinction Probability (111/113) vs 10% (114)
✓ Duplicate Removed: Article 113 Consolidated

Group 046 — Standalone Summary

1 Article (115)

NVIDIA released Isaac ROS 5.0 at ROSCon in Toronto, bringing agentic AI workflows, ROS Lyrical support, FoundationPose/FoundationStereo acceleration, and Jetson Thor edge AI integration to robotics developers (Article 115)[cite: 29, 31].
